

Syllabus for Basic Python & Basic C

Time: Wednesdays 19:00 to 19:40 (Python)

Time: Wednesdays 20:00 to 20:40 (C)

Instructor: Taehun Lee

Contact Information: th0611@taejae.ac.kr

Course description

In the Basic Python and C session, learning the basic grammar of programming is available. Both languages are widely known and used tools. If you ask for their differences, I would like to say Python is a simple version of C. However, clear differences exist. First, Python is called Object-oriented Programming, and C is not. Second, the definition of Standard Data Type is different. Python has been much simplified compared to C.

By taking this session, numerous examples for each grammar concept are provided. Starting from the definition of variables, the logical judgement, the loop, and the function are followed. Completing this session, you will be able to recognize and find the logical structure of the code you see for the first time.

Course Learning Objectives

1. Understand how the variables play a role in programming
2. Advance your process of logical judgments. Perhaps becoming an MBTI J person?
3. GET USED TO CODING!!

Required Reference

Basic Python: 모두의 파이썬 / Python for everyone

Basic C: 모두의 c언어 / C for everyone

Course Schedule

Fortunately, NO PRE-READINGS, NO POST-READINGS, NO HOMEWORKS. YEAH!!

[September]

Lesson 1. Download IDE (Python IDE / Visual Studio)

Lesson 2. What is a Variable? Standard Data Type

Lesson 3. How to save data and utilize it? Communicate with the computer

Lesson 4. Principle of the calculator!!

[October]

Lesson 5. How to draw a flow chart?

Lesson 6. What is "If-else"?

Lesson 7. What is "While"?

Lesson 8. What is "Function"?

Lesson 9. Final project!! Design your own calculator!!
